# A Letter From The Author: Why Did We Create This Report And Who Should Read It

From The Desk of: Tyler Pritchard  
Network Concepts

Dear Colleague,

Undoubtedly you've heard all the commotion around cloud computing and how it's the "next big thing." **Yet, despite all the hype, no one really seems to understand what cloud computing is or how it can help your business.**

That's why we wanted to set the record straight and provide business owners and executives with a simple, easy to read report that explains what cloud computing is, how it can (possibly) help their business and, if it can help, what they need to know in order to make good decisions about choosing a cloud vendor.

Why "possibly?" Because cloud computing is NOT a good fit for every company; and if you don't get all the facts or fully understand the pros and cons, you can end up making some VERY poor and expensive decisions that you'll deeply regret later.

That said, for some clients, cloud can actually lower their IT costs by 20% to 30%, greatly improve the ability for remote workers to connect and work, simplify their entire IT infrastructure and genuinely solve a number of technology problems that business owners have been trying to work around for years.

So can cloud computing help you? By the end of this report you'll know, or at least have a much better understanding. Of course, we are always available as a resource for a second opinion or quick question, so please feel free to contact my office direct if we can clarify any points made in this report or answer any questions you have.

Dedicated to serving you,

*Tyler Pritchard*

## About Network Concepts

*As a small business owner and consultant myself, I want to arm other business owners with a few good pointers to help them avoid getting the short end of the stick.*

*A large proportion of our business comes from referrals from happy, satisfied customers. We want you to recommend us and we know that you will only do this if you are happy with the services we provide. That is why we work so hard to go above and beyond the call of duty.*

*We require ALL of our staff to complete ongoing training to ensure we are up-to-date on the latest technologies and solutions. You won't find a better qualified team of professionals anywhere else.*

# 5 Critical Questions You Must Have Answers To Before Moving To The Cloud

In this report I'm going to answer the top 5 questions that I've heard just about every savvy business owner ask about cloud computing. I'll also provide an overview of what exactly cloud computing is and how it can possibly benefit your business.

I've also included some actual case studies from other businesses that have moved to cloud computing.

At the end of this report there is an invitation for you to request a **Free Cloud Readiness Assessment** to determine if cloud computing is right for your particular business. I encourage you to take advantage of this before making any decisions since we've designed it to take a hard look at the functionality and costs for you as a business and to provide you with the specific information you need (not hype) in order to make a good decision about this new technology.

## What Is Cloud Computing?

Wikipedia defines cloud computing as "the use and access of multiple server-based computational resources via a digital network (WAN, Internet connection using the World Wide Web, etc.)."

### **But what the heck does *that* mean?**

The easiest way to not only understand what cloud computing is but also gain insight into why it's gaining in popularity is to compare it to the evolution of public utilities. For example, let's look at the evolution of electricity.

Back in the industrial age, factories had to produce their own power in order to run machines that produced the hard goods they manufactured. Be it textiles or railroad spikes, using machines gave these companies enormous competitive advantages by producing more goods with fewer workers and in less time. For many years, the production of power was every bit as important to their company's success as the skill of their workers and quality of their products.

**Unfortunately, this put factories into TWO businesses:** the business of producing their goods and the business of producing power. Then the concept of delivering power (electricity) as a utility was introduced by Thomas Edison when he developed a commercial-grade replacement for gas lighting and heating using centrally generated and distributed electricity. From there, as they say, the rest was history.

The concept of electric current being generated in central power plants and delivered to factories as a utility caught on fast. This meant manufacturers no long had to be in the business of producing their own power. **In fact, in a very short period of time, it became a competitive necessity for factories to take advantage of the lower cost option being**

**offered by public utilities.** Almost overnight, thousands of steam engines and electric generators were rendered obsolete and left to rust next to the factories they used to power.

What made this possible was a series of inventions and scientific breakthroughs – but what drove the demand was pure economics. Utility companies were able to leverage economies of scale that single manufacturing plants simply couldn't match in output or in price. In fact, the price of power dropped so significantly that it quickly became affordable for not only factories but also for every single household in the country.

Today, we are in a similar transformation following a similar course. The only difference is that instead of cheap and plentiful electricity, advancements in technology and Internet connectivity are driving down the costs of computing power. With cloud computing, businesses can pay for “computing power” like a utility without having the exorbitant costs of installing, hosting and supporting it.

In fact, you are probably already experiencing the benefits of cloud computing in some way but hadn't realized it. Below are a number of clouds computing applications, also called SaaS or “software as a service,” that you might be using:

- Gmail, Hotmail or other free e-mail accounts
- Facebook
- NetSuite, Salesforce
- Constant Contact, Exact Target, Aweber or other e-mail broadcasting services
- Zoomerang, SurveyMonkey and other survey tools
- LinkedIn
- Twitter
- All things Google (search, AdWords, maps, etc.)

If you think about it, almost every single application you use today can be (or already is) being put “in the cloud” where you can access it and pay for it via your browser for a monthly fee or utility pricing. You don't purchase and install software but instead access it via an Internet browser.

## **Answers To The Top 5 Questions Business Owners Have About Cloud Computing**

**Question #1:** What if my Internet connection goes down for an extended period of time?

**Our Answer:** While this is a valid concern, we overcome it in the following way. For our clients who use the cloud our recommended Solution is to install a “Hybrid Cloud Network”. Ideal for small businesses with up to 25 users, Windows Essentials Server provides a cost-effective and easy-to-use solution to help protect data, organize and access business information from virtually anywhere, support the applications needed to run a business, and quickly connect to online services for e-mail, collaboration and CRM.

**Question #2:** What happens if the Internet slows to the point where it's difficult to work productively?

**Our Answer:** We resolve this also with the Hybrid Cloud Solution, your data is on your onsite server as well as in the cloud. Here's how this works: The technology synchronizes data between cloud servers and local servers in your office. So instead of getting rid of your old server, we replace it with a cheaper lower end server at your location and maintain an up-to-date synched copy of your files, folders and documents on it. Using this process, you get the benefits of the cloud with a backup solution to keep you up and running.

**Question #3:** What about security? Isn't there a big risk of someone accessing my data if it's in the cloud?

**Our Answer:** In many cases, cloud computing is a MORE secure way of accessing and storing data. Just because your server is onsite doesn't make it more secure; in fact, most small to medium businesses can't justify the cost of securing their network the way a cloud provider can. And most security breaches occur due to human error: one of your employees downloads a file that contains a virus, they don't use secure passwords, or they simply e-mail confidential information out to people who shouldn't see it. Other security breaches occur in on-site networks because the company didn't properly maintain their own in-house network with security updates, software patches, and up-to-date anti-virus software. That's a FAR more common way networks get compromised versus a cloud provider getting hacked.

**Question #4:** What if YOU go out of business? How do I get my data back?

**Our Answer:** We give every client a logon to manage their "Cloud Network" with documentation that clearly outlines where their data is and how they could get it back in the event of an emergency. This includes detailed information of emergency contact numbers, information on how to access your data and infrastructure without needing our assistance (although our plan is always to be there to support you), a copy of our information regarding your backups and licensing is provided.

In fact, you should never hire ANY IT professional that won't give you that information. We also can deliver a copy of your data on discs every month so you have a physical copy and back up the entire network.

**Question #5:** Do I have to purchase new hardware (servers, workstations) to move to the cloud?

**Our Answer:** No! That's one of the greatest benefits of cloud computing. It allows you to use older workstations, laptops and servers because the computing power is in the cloud. Not only does that allow you to keep and use hardware longer, but it allows you to buy cheaper workstations and laptops because you don't need the expensive computing power required in the past.

## Case Studies: What Our Clients Have To Say About Moving To The Cloud

*When Network Concepts recommended we move to cloud computing instead of spending a lot of money to upgrade our network, I was a bit concerned – but when I saw how much money we were going to save, I decided to go for it. I'm very happy we did. I wish I had done this sooner. Plus, Network Concepts tech support has been great. We really haven't had any major issues, but if we do, they're right on it getting it resolved. I'd highly recommend them to anyone looking to save money on IT... and who doesn't want to do that?" –*

### A Final Word...

I hope you have found this guide helpful in shedding some light on cloud computing. As I stated in the opening of this report, my purpose in providing this information was to help you make an informed decision and avoid getting burned by the many incompetent firms offering these services.

**Below you will find information on how to request a FREE Cloud Readiness Assessment. This is, of course, provided for free with no obligations and no expectations on our part.** I want to be clear that this is NOT a bait and switch offer or a trick to get you to buy something. My reputation for running an honest and trustworthy business is something I hold very dear. I would never jeopardize that in any way. So why are we offering something like this for free?

Two reasons:

1. We are simply offering this service as a risk-free “get to know us” offer to people we haven't had the pleasure of doing business with. Again, our goal is to allow you to make an informed and confident decision; offering this service is one way we can help you better evaluate our services.
2. This will allow us to determine if we even CAN help you. Obviously we can't help everyone and cloud computing might not be a good fit for your particular circumstances. Conducting this Assessment enables us to perform a small service to you and give you a risk-free way of determining whether or not we're the right company for you without risking your money.

**While we would love to be able to give these away to everyone, staff and time limitations simply won't allow it. That's why we can only give away 10 of these audits on a first come, first served basis for attendee that sign up at the Expo. (sorry, no exceptions).**

# FREE Cloud Readiness Assessment!

As a prospective customer, we would like to offer you a FREE Cloud Readiness Assessment and cost analysis. This Assessment has three parts:

1. **Cost Analysis and Inventory:** Our first step is to look at what your current network consists of in hardware, licenses, data, and applications. Next, we compile an IT cost assessment to reveal what you spend in total on IT, including Internet connectivity, support and other fees. Most business owners have never really looked at their entire IT costs this way, and often this report alone is an eye-opener. Why do we do this? Because our goal is to find ways we can significantly lower those costs while simplifying and improving your workflow.
2. **Health Check:** We will perform an Audit of your entire network to look for potential problems, security loopholes, spyware and other hidden problems that you might not know about. Often we find faulty backups, out-of-date anti-virus software, faulty firewalls and missing security patches that, if left unaddressed, could end up costing you MORE in new hardware, support, business downtime and data loss.
3. **Cloud Readiness:** After we've looked at the above areas, we then look at how you and your employees work and share information and see what applications or processes we can safely move to the cloud to improve ease of use and, of course, lower costs.

When complete, we'll give you a Cloud Action Plan that shows you if we can save you money and resolve a number of workarounds and problems you may have been experiencing to date. Even if you decide not to hire us, having a third party conduct this type of assessment will give you some good information on saving money and the security and health of your computer network.

## How To Request Your **FREE** Cloud Readiness Assessment:

*Please Complete And Fax This Form To: 1-215-565-2522 or Email Sales@NetworkConceptsInc.com*
